SUMMARY

Developed and delivered high-quality React web applications on time and within budget. Worked closely with cross-functional teams to gather requirements, design solutions, and implement features. Successfully migrated a legacy web application to React, improving performance and user experience. Actively participates in online and offline React communities

TECHNICAL SKILLS

HTML/CSS, JavaScript, React, NextJS, Figma, Node.js, NoSQL, MySQL, CMS, npm, MongoDB, Styled-Components, Python, Github, React Context, Postman, Xampp, VSCode, GraphQL, Typescript, KeystoneJs, Tailwind CSS, Headless UI, Vite JS, Storybook Js, Linux/Unix

TECHNICAL PROJECTS

TripeTen: Synthesis Workshop Externship - [Github](#) | [Site](#) | [Project Overview](#)

A Full stack web site: Synthesis Workshop, redesigned and built from scratch, Synthesis Workshop is an open access video podcast exploring the field of organic synthesis.

- Used React typescript, TailwindCSS, Tailwind Components, Headless UI, Vite JS, Storybook JS, KeystoneJs, GraphQL
- with teammates to solve issue and improve workflow
- Used Jira software for Project and task management

Practicum AROUND THE U.S. Page- [Github](#) | [Site](#) | [Project Overview](#)

A beautiful image gallery page that users are able to post their favorite places images, change their name, job title and like/unlike other's images in gallery

- Added delightful animations with Animate On Scroll CSS3 library
- Worked with Slack, Github, and Trello to organize tasks among the team
- Reviewed Pull Requests and talked through code reviews asynchronously using Loom
- Created content models for future editors to fill out and dynamically update pages using a CDN

What To Wear React App- [Github](#) | [Site](#) | [Project Overview](#)

Full-stack app with MongoDB and NodeJS that allows users to Signup, add desired clothing items and get results based on weather condition

- Built a fully responsive front-end using CSS and Media Queries
- Integrated internal and external REST Api
- Used React Context API for dependency injection

August Code Jam with TripleTen: Travellian landing page- [Github](#) | [Site](#) | [Project Overview](#)

- Used HTML, CSS, JS to make a beautiful static landing page
- Communicated with teammates to solve issue and improve workflow
- Used Trello for Project and task management
- Used Netlify to Host and deploy landing page
